PARISUTHAM INSTITUTE OF TECHNOLOGY & SCIENCE
DEPARTMENT OF AERONAUTICAL ENGINEERING
TWO DAY WORKSHOP ON AERO MODELLING
REPORT

Department of Aeronautical Engineering in association with Akash Aero Modelling Ltd. has conducted a two days workshop on Aero modelling from 04th Oct 2018 to 05th Oct 2018.

Total number of students participated in the workshop are 36.

Amount collected from each student is Rs.1200/.

The first day of the workshop was to impart a practical knowledge about aero modeling and the basic idea of how to make a glider. The 36 students were divided into 18 groups and were given a takeaway kit to make the glider. Students involved themselves in designing their own gliders and flying it.

On the second day of the workshop, the students were taught about the basics of flight instruments and power gliders. They were again provided with a non-takeaway kit of making a powered glider. Students were trained in handling the various flight controls.

A competition was conducted and the students were selected on the basis of flight endurance (total time of glider in the air), flight range and design. Best designer and flyer were awarded with a trophy and certificates..

All the students were given a participation certificate for the Aero modeling workshop.

The two days workshop was organized by the Department of Aeronautical Engineering in a systematic way and it was a grand success.

TWO DAY WORKSHOP ON AERO MODELLING
JOUNCE SCRUTINY REPORT OF FEEDBACK FORM

Department of Aeronautical Engineering in association with Akash Aero Modelling Ltd. has conducted a two days workshop on Aero modelling from 04th Oct 2018 to 05th Oct 2018.

The Highlights of the workshop are:

- To learn Design process of fixed wing aircraft
- To understand the Fabrication of Fuselage, Wing, Horizontal and Vertical Stabilizers.
- Demo on Flying of Dynamic Model.
- Competition conducted on model made by students to test the glider with stability and endurance and the best three students were selected

The workshop ended successfully with the student gained sufficient knowledge about the workshop. Feedback from the student was recorded.

Positive Comments	Negative Comments
Student was confident of making a glider	Insufficient power plant to fly models.
Basic lecture description about aero modeling was good.	Only basic design features were discussed.
Aero modeling session was well organized and well facilitated.	Insufficient time for flying of models.
Overall opinion of the workshop was good.	No comments.

One day workshop on "TECHNOLOGY INTEGRATION IN CIVIL ENGINEERING
USING AUTOCAD"

REPORT

PARISUTHAM INSTITUTE OF TECHNOLOGY & SCIENCE, conducted workshop for 2nd civil in the topic of "Technology integration in civil engineering using AUTOCAD" for II year Civil students by Mrs.S.Shyamala Devi, CADD center, Thanjavur on 09.09.2016 at CPL3.

AutoCAD is used across a wide range of industries, by architects, project managers, engineers, graphic designers, and many other professionals. It is supported by 750 training centers worldwide as of 1994. **erspective** (from Latin: *perspicere* to see through) in the graphic arts is an approximate representation, on a flat surface (such as paper), of an image as it is seen by the eye. The two most characteristic features of perspective are that objects are smaller as their distance from the observer increases; and that they are subject to *foreshortening*, meaning that an object's dimensions along the line of sight are shorter than its dimensions across the line of sight.

A perspective view of an object is a view that shows at least two edges of a shape or object that are parallel to each other. These edges must appear to be converging toward each other as they extend away from your line of sight. Drawing a perspective view in AutoCAD involves using a number of commands, including the "Perspective" command. Other commands needed to produce a perspective view include those for changing the viewpoint with which you look at an object. AutoCAD has several such commands. The "3dorbit" command is one of the most commonly used.

You can create realistic visual effects in a drawing by defining either parallel or perspective projections of a model. The difference between perspective views and parallel projections is that perspective views require a distance between a theoretical camera and target point. Small distances produce severe perspective effects; large distances produce mild effects. A perspective view remains in effect until the perspective effect is turned off or until a new view is defined in its place.
